An increase of pyruvate production capacity

We are delighted to inform that an increase of pyruvate production capacity was published in "The Chemical Daily" on October 13, 2020".

We increase pyruvates production capacity to meet growing demand for pyruvic acid, sodium pyruvate, and ethyl / methyl pyruvate from our customers.

We built a stable supply system to support new applications that are expected to grow in the future, such as medical ingredients, agrochemicals, synthetic ingredients, microbial fermentation fields, and cell culture media.
